

# Filtered Fueler with Feed Cap

- Includes Premium Silicone Fuel Tubing and a Double Screen “Crap Trap” Filter with Aluminum ends
  - 38 mm Cap fits standard One Gallon fuel jugs
  - 1/8” Probe fits most tubing and Sullivan Fuel Filler Valves

## Instructions

Cut off a one inch piece of the Silicone Fuel Tubing. Slide it over the 1/8” probe and onto the serrated aluminum end of the filter. When the probe is pushed into the vent nipple of the cap, the tubing will seal onto the outside of the nipple.

Attach the other end of the fuel tubing to your fuel pump, and attach a fuel tube from the fuel pump to the feed nipples on the cap. Attach a piece of fuel tubing and the klunk to the inside feed nipple so that it goes to the bottom of the gallon fuel jug.
